

AHE LOUVRE-LOCK PLASTIC COATED ALUZINK WEATHER LOUVRES

AHE 'LOUVRE-LOCK'[®] External louvres are manufactured from plastic coated galvanised steel (ALUZINK) using a unique interlocking assembly process. Specially developed for use on mechanical fresh air input and exhaust air systems, these products are ideally suited for incorporating into new and existing buildings. Available in a wide range of colours to suit most new modern building styles or alternatively in plain galvanised finish where aesthetic appearance is less importance.

Standard features include;

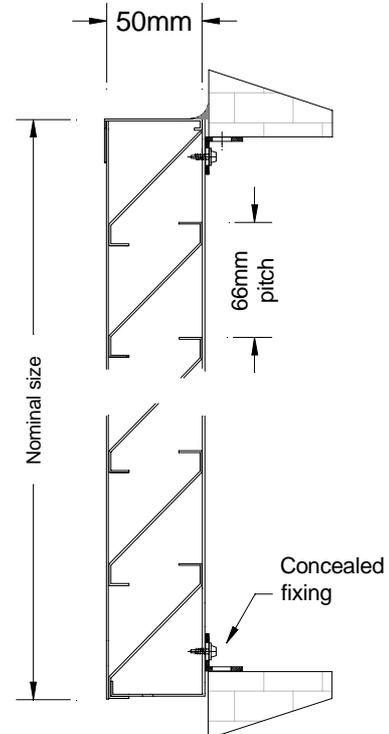

- Strong robust construction.
- Maintenance free durable finish, 15 - 25 years in average industrial use.
- Product Life expectancy of 30 years or more.
- Colours to match standard wall and roof cladding systems.

Optional features;

- Bird / debris screen
- Insect screen
- Concealed fixing brackets
- Drip angle

Alternative material construction;

- Aluminium
- Stainless steel

Surface mounted louvre with concealed (internal) fixings for high security application.
